 The Power Of One

Fact Sheet

INVENTORY

Gain visibility and control of your inventory processes, from ordering to issuing of stock. Technology One's comprehensive Inventory Management solution is fully integrated to financial information for clear and accurate reporting.

FULLY INTEGRATED SOLUTION

A comprehensive inventory management solution fully integrated to the financial management system. Run extensive reports and enquiries for all products and transactions, with drill down functionality taking you directly to transactional and financial information.

CATALOGUES

Use multiple catalogues to differentiate product information, inventory and inventory control records. Separate supplier catalogues provide detailed supplier product information that can be imported and stored independently of the internal product catalogue.

MULTIPLE INVENTORY SYSTEMS

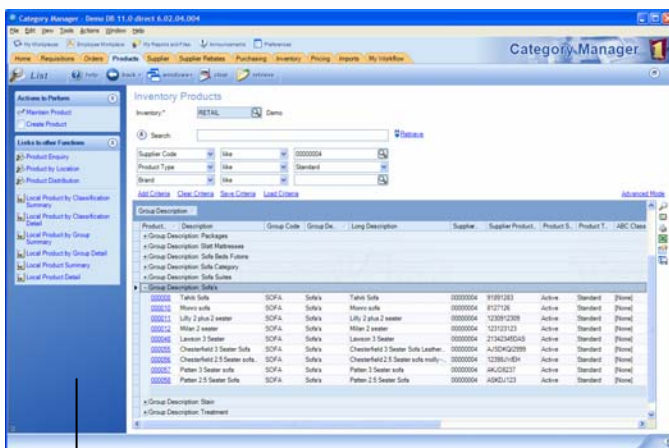

Multiple Inventory Systems incorporate management functions for multiple 'stocked' product ranges including full location based inventory management, detailed costing and financial reporting and enhanced stock control and logistics management.

SECURITY

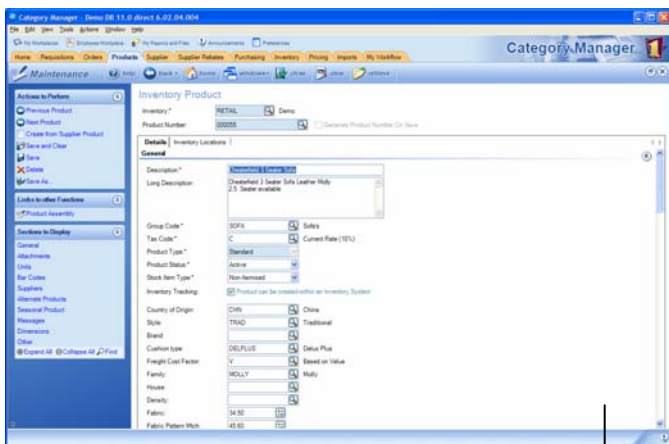

Maintain security to control access to supplier profiles, product catalogues and inventory locations right down to the individual product groups within catalogues.

KEY FEATURES

- Comprehensive multi-location Inventory Management System.
- Total transparency into company-wide inventory stock levels and performance with accurate up to the minute information
- User definable product fields for categorisation, reporting and enquiries.
- Full product description details from name and code, to barcodes, warranties, multiple suppliers, costing, kits, attachments, style/colour/size/fit and multiple units of measure.
- Manage batch and serial tracking of inventory with ease.
